DETAILED ACTION

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, drawn to a first device for transferring cells from a cell suspension onto a substrate, classified in class 435, subclass 283.1, for example.
- II. Claims 19-28, drawn to a second device for transferring cells from a fluid suspension onto a substrate, classified in class 435, subclass 288.4.
- III. Claims 29-31, drawn to a method for depositing cells from a fluid suspension onto a solid substrate, classified in class 435, subclass 395, for example.
- IV. Claims 32-37, drawn to a device for retrieving cells from a cell collection device, classified in class 435, subclass 288.5, for example.

Inventions III (process) and I-II (distinct devices for depositing cell onto a substrate) are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process of Group III does not necessarily require the device of Group I or the device of Group II.

Art Unit: 1654

The devices of Groups I and II are different and distinct, each from the other. The device of Group I requires various means (segregation means and transfer means) so as to provide a cell monolayer on the substrate, which is not necessarily required of the Group II device. The Group II device requires two or more chambers having channels with a retaining means and a displacement device, which is not necessarily required of the Group I device. Further, the device of Group III is drawn to performing a task which is opposite from that of the devices of Groups I and II - i.e., retrieving cells from a cell collection device vs. a cell collection device for depositing cells onto a substrate.

The several inventions above are independent and distinct, each from the other. The search for each of the above inventions is not co-extensive particularly with regard to the literature search. Further, a reference which would anticipate the invention of one group would not necessarily anticipate or even make obvious another group. Finally, the consideration for patentability is different in each case. Thus, it would be an undue burden to examine all of the above inventions in one application.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
